

Secnidazole 2g Taste Masked pellets in Sachets for Bacterial Vaginosis launched in Bolivia and Peru

April 2018:

Athena DDS, a technology driven company specialized in Oral Solid Dosage forms, announces yet more launches in LATAM after 2015.

‘Secnidazole 2 gram is a high dose One Shot Treatment, which replaces 7 days treatments of Metronidazole in Bacterial Vaginosis. The Taste Masking brings the benefit of reducing the metallic taste which is common for Metronidazole and Secnidazole molecules. It demonstrates the interest of the Gynecologist’s and General Physicians for a unique dosage form for this molecule other than tablet and/or capsule that are already prevalent in the market’ enunciates Alexandre Williams, Managing director of Athena DDS.

‘We are proud to announce our subsequent launch in Latam with South American Express and Inti Pharma for Secnidazole Sachets following the submission in last year. It demonstrates our ability to work successfully in the developed markets; thereby extending our footprint and opening opportunities.’ enunciates Alexandre Williams, Managing director of Athena DDS.
